Re: Docket #99P-2630

Dear Sir or Madam:

I am pleased to enclose a petition from 312 dietitians urging the FDA to "set a Daily Value (DV) for added (refined) sugars and require food labels to disclose the percentage of the Daily Value and grams of added sugars on food labels." That petition supports the petition that CSPI filed last summer.

Sincerely,

Michael F. Jacobson, Ph.D.  
Executive Director

99P2630

54P2

# Petition to Dr. Jane Henney, Food and Drug Administration

We, the undersigned health professionals, urge you to set a Daily Value (DV) for added (refined) sugars and require food labels to disclose the percentage of the Daily Value and grams of added sugars on food labels. The FDA should set the DV for added sugars at 10 teaspoons (40 grams) based on levels recommended by USDA. Consumption of added sugars has increased by 28% since 1983. Diets high in added sugars squeeze healthier foods out of the diet, contributing to osteoporosis, cancer, and heart disease. Such diets also contribute to tooth decay and obesity.

# Petition to Dr. Jane Henney, Food and Drug Administration

We, the undersigned health professionals, urge you to set a Daily Value (DV) for added (refined) sugars and require food labels to disclose the percentage of the Daily Value and grams of added sugars on food labels. The FDA should set the DV for added sugars at 10 teaspoons (40 grams) based on levels recommended by USDA. Consumption of added sugars has increased by 28% since 1983. Diets high in added sugars squeeze healthier foods out of the diet, contributing to osteoporosis, cancer, and heart disease. Such diets also contribute to tooth decay and obesity.
